

Gericke says thank you for 125 years of customer's trust

From humble beginnings in the year 1894, the company Gericke evolved into a globally positioned and successful provider full of solutions in the bulk goods industry.

1894 in the heart of Zürich Ing, Walter H Gericke founded his machine and mill building factory. He quickly attained an excellent reputation as a specialist and as a reliable supplier of modern, partly-automated, milling plants. He sold roller mills from the prestigious company Seck from Dresden.

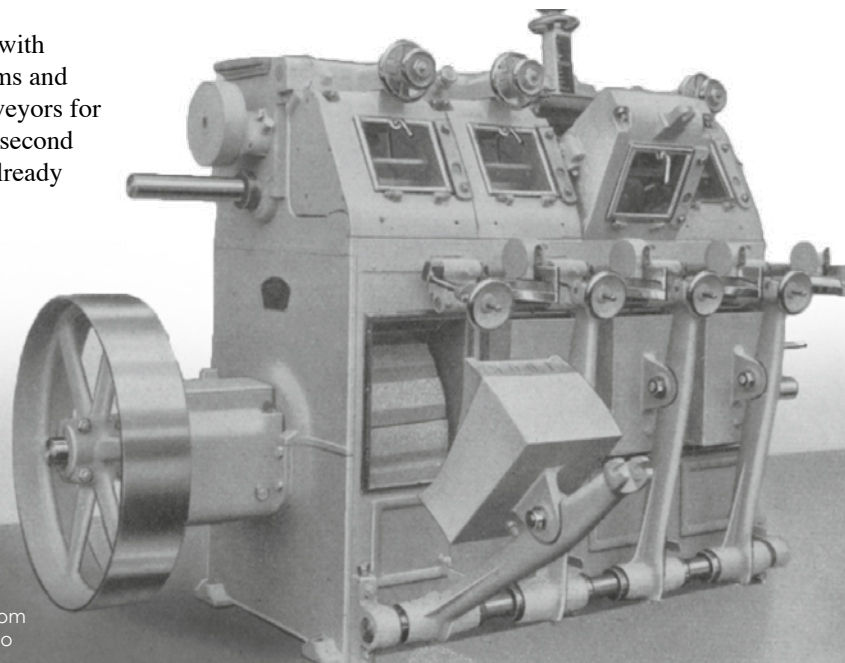

Innovation was in the foreground in the 40's, with the construction of pneumatic conveying systems and vibrational dosing units or with steel-band conveyors for chocolate industries. In this period of time, the second generation with Otto and Walter Gericke was already standing at the helm.

From the 60's on, Dr Hermann and Willi Gericke set significant milestones in terms of internationalisation. New technologies remained in the focus, whereby less common types of machines succeeded into the programme through licence agreements with various US companies.

Markus Gericke is leading the company, now in its fourth generation. The reliability

and the durability of Gericke machines and installations is legendary. Meanwhile, engineering and the construction have been extended to new locations including Asia, the US and South America. The Gericke Group Management is employing worldwide over 300 employees in 12 different locations.

The family business is happy about the decade-long trust which customer's have given. The executive management and all the employees want to express their gratitude and are excited about new and interesting projects.
